

Infrastructure – Construction of a new waste transfer station, Waste Management Center Breinermoor

Characteristics:

- Concrete floor for the waste transfer station, Construction Class III 5,000 m²
- Asphalt driveways, Construction Class II 1,800 m²

Establishment of the concrete floor

Scope of Work:

- Development of service specifications
- On-site construction site management

Description:

In the waste management center of Breinermoor the delivered materials in household garbage bags are comiled into large transport units for transport and supplied for further recycling.

The engineering company Dr. Born – Dr. Ermel, Office Ostfriesland, has planned a 5.000 m² waste transfer station with the corresponding driveways, fencing and drainage.
